

ESTANDARES Y SOFTWARE PARA LA WEB – JAVASCRIPT – EJERCICIO 13

MARTIN BELTRAN DIAZ – UO276244

JUSTIFICACION ERROR VALIDACION EN TAW (AAA):

Al validar con aChecker, éste me advierte que tengo un error de contraste en una label, pero los colores de esta label son: negro para el fondo y blanco para el texto (cosa que no debería tener error de contraste). El validador de contraste de WebAIM ([WebAIM: Contrast Checker](#)) no tiene constancia de este error, por lo que deduzco que se trata de un falso positivo.

A continuación dejo capturas de los hechos:

The screenshot shows the aChecker 'Check Accessibility By:' interface with the URL 'https://uo276244.github.io/SEW_JS/Ejercicio-12/Ejercicio12.htm'. Below, the 'Accessibility Review' section indicates 'Known Problems (1)' and 'Likely Problems (0)'. A specific error is listed: 'Line 23, Column 13: The contrast between the colour of text and its background is not sufficient to meet WCAG2.0 Level AAA.' The error message includes a 'Repair' instruction and examples of color contrast.

The screenshot shows the WebAIM Contrast Checker interface. It displays 'Foreground Color' as #000000 and 'Background Color' as #FFFFFF, resulting in a 'Contrast Ratio' of 21:1. Below this, it shows 'Normal Text' and 'Large Text' both passing WCAG AA and AAA standards. A 'permalink' is provided. On the right, 'Related Resources' are listed. At the bottom, 'Graphical Objects and User Interface Components' are shown, with a 'Text Input' field marked as passing.
